WORK EXPERIENCE

Full-Stack Software Developer
Sagacity Software Inc
2019 December - Present

- Wrote server-side and client-side code for an IoT web-based energy smart-metering platform using JavaScript, HTML, CSS, and PHP. Specifically with React JS library and Node JS environment.

- Administered, supported, and monitored databases by proactively resolving database issues and maintaining servers.

- Developed and maintained robust Java code for an email server.

- Coded a cross-platform mobile app using React-Native to help users track their real-time energy usage for both iOS & Android devices and deployed it to the Apple App Store and Google Play Store.

- Wrote, modified, and maintained software documentation and specifications.
